ALTIQ PRODUCT FAMILY

Cleanroom wipes

PRODUCT PROFILE

Product type: Premium low-particle cleanroom wipes

Intended users: Professional / Industrial

ALTIQ is PEKOVKER Kft.'s professional wipe product family, providing uncompromising performance for the most demanding cleanroom, pharmaceutical, biotechnology and high-tech manufacturing environments.

Manufacturing, quality control and packaging are carried out in a controlled, certified cleanroom environment. The material structure meets modern industrial requirements: an optimal hybrid blend of 55% cellulose and 45% polyester combines the excellent liquid-retention capacity of natural fibers with the tensile strength and low-lint performance of synthetic fibers.

KEY PRODUCT BENEFITS AND TECHNICAL FEATURES

- **Certified cleanroom manufacturing:** The entire manufacturing and packaging process takes place in a controlled contamination-free environment, minimizing the risk of external contamination. The wipe material and production environment meet the requirements of ISO Class 5 under ISO 14644-1 and GMP Grade B/C environments.
- **Critical particle control (low-lint):** Thanks to the special fiber-bonding technology, the wipes do not release microscopic fibers or particles even under mechanical stress such as rubbing.
- **Outstanding liquid absorption capacity:** The cellulose-based inner core can absorb and retain several times its own weight in both water-based and solvent-based liquids, including alcohols.
- **Chemical resistance:** Excellent compatibility with surface disinfectants used in pharmaceutical and healthcare environments, including alcohols, quaternary ammonium compounds and chlorine dioxide, as well as industrial solvents such as IPA.
- **Double protective packaging (double bagging):** Products are supplied in two layers of hermetically sealed protective film. The outer packaging can be removed in the airlock, allowing the inner pack to enter higher cleanliness areas such as Grade A/B or ISO 5 zones without contamination.

Applications, handling and ordering information

PRIMARY APPLICATION AREAS

- **Pharmaceuticals and biotechnology** For wiping equipment and work surfaces in laboratories, sampling areas and classified GMP production areas.
- **Electronics and high-tech industry** For semiconductor manufacturing, precision assembly facilities and especially battery production, where even the smallest dust particles can cause short circuits or rejects.
- **Optical industry** For scratch-free and streak-free cleaning of precision components, lenses, lasers and measuring instruments.

HANDLING AND STORAGE GUIDE

Use: Following the airlock protocol, remove the first protective film before entering the cleanroom. Open the inner film only at the point of use. If needed, saturate the wipe with a suitable cleaning agent or disinfectant, such as 70% isopropyl alcohol, then clean the surface using unidirectional, overlapping strokes.

Storage: Store in the original unopened packaging in a dry, cool place protected from direct sunlight and contamination.

Waste disposal: After use, place the wipe in a waste container appropriate to the hazard classification of the absorbed material, such as hazardous or industrial waste.

For moistening the wipes, we recommend the surface disinfectants and alcohol-replacement products listed at the back of the catalog.

INDURIX PRODUCT FAMILY

Industrial wipes

PEKOVKER's professional wipe product family provides reliable solutions for industrial environments. INDURIX products were developed with low particle release, excellent liquid absorption and the requirements of professional users in mind. The INDURIX range is designed for professional industrial, technical and general surface-treatment tasks, providing high absorption capacity and economical use.

KEY FEATURES

- Excellent liquid absorption
- For professional industrial use
- Economical pack formats
- Multiple formats and basis weights

APPLICATION AREAS

Automotive industry: Cleaning and maintenance are essential to maintaining efficiency and quality in automotive production. INDURIX wipes are suitable for cleaning machinery, components and other equipment. Their high absorption capacity enables fast removal of oils, greases and other liquids.

Machine cleaning: Efficiency and reliability are essential during machine cleaning. The thickness and material composition of the wipe support thorough and safe cleaning, helping extend equipment life and maintain efficient operation.

wet wipe (70% IPA)
BOXED P68

FOR PROFESSIONAL USE
160 wipes per canister

» Presaturated with 70% Pharma grade 2-Propanol/ 30 % purified water, filtered at 0,2 micrometer, intended use in cleanrooms from ISO 9 to 6, EU GMP grade B to D
 » Very low levels of ions and extractables
 » Prepared and packed in cleanroom environment

Storage
Keep pack tightly closed when not in use. Store in a cool, dry & well ventilated place.

Danger
Flammable solid. Causes serious eye irritation. May cause drowsiness or dizziness. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Avoid breathing fumes. IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice.

Contains: PEOPAN-2-OL
Allow to completely evaporate before use electric instruments.

Expiry Date: See on package

Directions for use

1. Remove the lid and break the seal
2. Pull the first wipe through the dispenser opening
3. Replace the lid
4. Remove a wipe and clean the surface
5. Dispose of used wipes and packaging in a suitable waste container
6. Allow the surface to dry for at least 5 minutes
